

How to delete the Multiple Cloud Providers resources

First step - Empty your bucket

- Access the AWS Console and open S3 Service.
- Select your bucket and click on Empty.
- To confirm deletion, type *permanently delete* in the text input field.
- Click on Empty.

First step concluded! 🎉

Second step - Set the instance deletion_protection from true to false

- Open the Google Editor, and access the following path:
mission1_en/mission1/en/terraform/. Now, open the tcb_gcp_database.tf file
 - On line 11 of the tcb_gcp_database.tf file:
 - Replace from deletion_protection = "true" to deletion_protection = "false"
- Example:**
- First version: deletion_protection = "true"
 - Updated version: deletion_protection = "false"

- Change from Editor to Terminal
- Run the commands to apply the terraform file changes:

```
cd ~/mission1_en/mission1/en/terraform/ terraform init terraform apply Enter  
a value: yes
```

Now, you're ready to delete all the resources with the terraform destroy. 🚀

- Run the following command:

terraform destroy *Enter a value: yes*

```

google_container_cluster.primary: Destruction complete after 3m31s
Destroy complete! Resources: 4 destroyed.
```

Congratulations! All resources were deleted from multiple Cloud Providers with just a command! 🚀✅
